## LESSON PLAN

### Zoology paper A and B

#### Semester 1st

| <b>Semester<br/>1st</b>      | <b>Paper A<br/>Biodiversity and cell biology</b>  |  |
|------------------------------|---|--|
| <b>September<br/>(Start)</b> | Amoeba, Entamoeba, paramecium, plasmodium   |  |
| <b>October<br/>(Start)</b>   | Sycon, obelia   |  |
| <b>November<br/>(Start)</b>  | Fasciola, Taenia  |  |
| <b>December<br/>(Start)</b>  | Ascaris, parasitic adaptations in helminths   |  |
| <b>January<br/>(Start)</b>   | Pheretima   |  |
| <b>January<br/>(End)</b>     | <b>University Exams</b>   |  |
|                              |   |  |
| <b>Semester<br/>1st</b>      | <b>Paper B<br/>Inland Fisheries and aquaculture</b>   |  |
| <b>September<br/>(End)</b>   | Principles and applications of light and electron microscopes, fixation and fixatives, staining techniques (simple and double)<br>Concept of prokaryotic and eukaryotic cell, extra nuclear and nuclear organization of cell<br>Structure of plasma Membrane (fluid mosaic model), osmosis, active and passive transport, endocytosis, exocytosis |  |
| <b>October<br/>(End)</b>     | Endoplasmic reticulum -structure, associated enzymes and functions<br>Mitochondria-structure, enzymes and mitochondrial DNA, role of mitochondria in respiration<br>Golgi complex-structure, associated enzymes and functions   |  |
| <b>November<br/>(End)</b>    | Lysosomes-Enzymes, polymorphism and functions<br>Ribosomes-structure, types and functions   |  |

|                       |   |
|-----------------------|---|
|                       | Centrosome-structure and functions  |
| <b>December (End)</b> | Nucleus-structure and functions of nuclear membrane, nucleolus and chromosomes, Euchromatin and Heterochromatin<br>Cancer-introduction, Difference between normal and cancer cell, Types of cancer, Basic idea of transformation<br>cellular and Humoral immunity, Elementary idea of cells and organs of immune system |
| <b>January (Mid)</b>  | Revision of Important Topics  |
| <b>January (End)</b>  | <b>University Exams</b>   |

*Ganga S. K.*

## Lesson plan

### BA Geography Semester I & II

| <b>Semester I</b>  | <b>Paper II Cartography-I</b>  |
|--------------------|--|
| <b>August</b>      | Geometry of earth Scales: Plain scale, Comparative scale, Time scale, Diagonal scale             |
| <b>September</b>   | Plotting of a course, true north, magnetic north, Brief history of map and its types             |
| <b>October</b>     | Finding True north with the help of pole star, a watch, a Rod,                                   |
| <b>November</b>    | Bearing, hill shading, hachures & layer Tint Contours  |
| <b>December</b>    | <b>University Exam</b>   |
|                    |  |
| <b>Semester II</b> | <b>Paper IV Cartography-II</b>   |
| <b>January</b>     | Elements of map design, Concept of GPS   |
| <b>February</b>    | Representation of relief: Hill shading, hachures, benchmarks, contours.                          |
| <b>March</b>       | Weather map, weather symbols including beaufort's scale employed in Indian Daily Weather Maps    |
| <b>April</b>       | Interpretation of Weather maps in India: Summer, Monsoon & Winter Season                         |
| <b>May</b>         | Weather forecasting through the study of weather maps and recent advances in Weather forecasting |
| <b>June</b>        | <b>University Exam</b>   |

*B. S. S.*

*h. s.*

## MA Geography I, III, II &amp; IV

|                     |  |
|---------------------|--|
| <b>Semester I</b>   | <b>Paper III Cartography</b>   |
| <b>August</b>       | Cartography-Nature, History & Recent Trends. Types of Data & Symbols. Landform Mapping & Analysis: Elementary conventional Methods                             |
| <b>September</b>    | Profiles, calculation of Gradient, scales of slopes, Wentworth methods of Slope analysis.  |
| <b>October</b>      | Robinson Methods of slope analysis, Mapping of climatic Data: Temperature and Rainfall   |
| <b>November</b>     | Representation of population & agricultural Data, GIS and Computer Assisted Cartography  |
| <b>December</b>     | <b>University Exam</b>   |
| <b>Semester III</b> | <b>Paper I Town &amp; Country Planning</b>   |
| <b>August</b>       | Town Planning Nature, scope, importance, Preparation of town plan, Formulation of policies, Zoning, Planning of transport & Public utilities.                  |
| <b>September</b>    | Human Settlement, Settlement System, Problems of town planning in India. Urban planning policies in Indian Five Year plans, Master plan of Delhi & Chandigarh. |
| <b>October</b>      | Country planning, Rural land use & its determinants, Land suitability & Soil Surveys. Town & Country planning practice in India.                               |
| <b>November</b>     | Rural development in India during Five Year Plans, Problems in Rural India like as Drinking Water, Flood & Soils, Poverty & employment                         |
| <b>December</b>     | <b>University Exam</b>   |
| <b>Semester III</b> | <b>Paper III Fundamentals of GIS and GPS</b>   |
| <b>August</b>       | Map Concept, Map Projection, Data Input, storage, editing, Nature of geographic data, History of GIS   |
| <b>September</b>    | Concept of Raster & Vector data models Digitization, Components & Functional elements of GIS   |
| <b>October</b>      | GPS introduction & usages, GPS based data acquisition  |
| <b>November</b>     | Cartography & map production, Presentation of GIS output.  |
| <b>December</b>     | <b>University Exam</b>   |
| <b>Semester II</b>  | <b>Paper III Fundamentals of Remote Sensing</b>  |
| <b>January</b>      | Concept of remote sensing, remote sensing platforms, sensors & scanning system.  |
| <b>February</b>     | Major satellite system & their use, EMR radiation, energy atmosphere interaction   |
| <b>March</b>        | Image processing and interpretation, resolutions.  |
| <b>April</b>        | Aerial photographs, geometry of aerial photograph, measurement of scale, height & slope from vertical Aerial photograph.                                       |
| <b>May</b>          | Relief Displacement & Parallax, Energy Earth interaction Spectral signature of surface features.   |

|             |   |
|-------------|---|
| June        | University Exam   |
| Semester II | Paper IV Opt-iii Fundamentals of Natural Hazards & Disaster Management  |
| January     | Introduction Of hazards & disaster, Types, vulnerability, disaster risk & resilience  |
| February    | Hazards mechanism & processes, earthquake & landslide hazards, Avalanche & Floods/flash floods  |
| March       | Cyclone & associated hazards, regional dimension of hazards in India, Floods, Drought & Desertification in India.                           |
| April       | Disaster in Himachal Pradesh, disaster management concept & activities  |
| May         | Disaster management Mechanism in India, disaster management Policies.   |
| June        | University Exam   |
| Semester IV | Paper I Regional Planning   |
| January     | Regional Planning concept, difficulties, principles, role of geography in regional planning   |
| February    | Regions for planning regional awareness, region and its evolution, planning regions of India  |
| March       | Survey for planning, regional survey, diagnostic survey, techno-economic survey   |
| April       | Role of remote sensing, GIS, GPS, process of regional development & disparities   |
| May         | Regional planning in USA (TVA), regional planning in India (DVC & NCR) regional planning in Netherlands (Polders)                           |
| June        | University Exam   |
| Semester IV | Paper I Quantitative methods in Geography   |
| January     | Types of spatial data, their measurements, sample survey  |
| February    | Sampling design, measures of central tendency: mean, median, mode, point of minimum aggregate travel distance, population potential.        |
| March       | Measures of dispersion: range, Quartile deviation, standard deviation, Lorenz curve, nearest neighbour analysis, coefficient of variability |
| April       | Scatter diagram, correlation by spearman's rank difference and karl pearson's product moment methods,                                       |
| May         | Regression analysis, regression line, coefficient of areal correspondence.  |
| June        | University Exam   |

*B. Pathy*

*Pathy*

# LESSON PLAN

## MSc. Physics , Semester I

| Semester I       | CLASSICAL MECHANICS  |
|------------------|--|
| <b>August</b>    | Independent co-ordinates of rigid body, orthogonal transformation. Eulerian angles and Euler's theorems .infinitesimal rotation. Rate of change of vector, Coriolis force, angular momentum and kinetic energy of a rigid body, the inertia tensor, principal axis transformation. Euler equations of motion. Torque free motion of rigid body, motion of a symmetrical top  |
| <b>September</b> | Mechanics of a system of particles: constraints of motion. Generalized coordinates, D'Alembert's Principle and Lagrange's velocity – dependent force and the dissipation function. Application of Lagrangian formulation. Hamilton Principle : Calculus of variations. Hamilton principle. Lagrange's equation rom Hamilton's principle. Extension to non-holonomic systems, advantages of variational principle formulation, symmetry properties of space and time and conservation theorems. |
| <b>October</b>   | Eigenvalue equation. Free vibrations. Normal Coordinates. Vibrations of a triatomic molecule. Hamilton's Equations: Legendre Transformations. Hamilton's equations of motion. Cyclic-coordinates. Hamilton's equations from variational principle, principle of least ac   |
| <b>November</b>  | Canonical transformation and its example, Poission brackets. Equations of motion, Angular momentum. Possion's bracket relations, infinitesimal canonical transformation. Conservation Theorems. Hamilton – Jacobi equations for principal and characteristic functions. Harmonic oscillator problem, Action angle variables for system with one degree of freedom.   |
| <b>December</b>  | <b>University Exams</b>  |

*Bhagwanth*

| <b>Semester I</b> | <b>QUANTUM MECHANICS I</b>  |
|-------------------|---|
| <b>August</b>     | Vector spaces, Schwarz inequality, Orthonormal basis. Schmidt orthonormalisation method, Operators, projection operator. Hermitian and Unitary operators, change of basis, Eigenvalue and Eigenvectors of operators. Dirac's bra and ket notation, commutators, Simultaneous eigenvectors.  |
| <b>September</b>  | Postulates of quantum mechanics, uncertainty relation. Harmonic oscillator in matrix mechanics. Time development of states and operators. Heisenberg and Schroedinger representations. Exchange operator and identical particles. Angular part of the Schroedinger equation for a spherically symmetric potential, orbital angular momentum operator, Eigen values and eigenvector of $L^2$ and $L_z$ , Spin angular momentum. General angular momentum, Eigenvalues and eigenvectors of $J^2$ and $J_z$ .. Representation of general momentum operator. Addition of general angular momentum, C.G. coefficients. |
| <b>October</b>    | Non- Degenerate and degenerate perturbation theory and its application to anharmonic oscillator, Variational method with application to the ground states of harmonic oscillator, hydrogen atom, helium and other simple cases.   |
| <b>November</b>   | General expression for the probability of transition from one state to another. Constant and harmonic perturbations. Fermi's golden rule and its application to radiative transition in atoms. Selection rules for emission and absorption of light.  |
| <b>December</b>   | <b>University Exams</b>   |

*Bhagwanth*

| Semester I       | ELECTRONICS I  |
|------------------|--|
|                  |  |
| <b>August</b>    | Growth of semiconductor crystals, Direct and indirect semiconductors, Effect of temperature and doping on Carrier concentration and their mobility, Drift and diffusion of carriers, Carrier lifetime and Photoconductivity, Energy band diagrams, position of Fermi level. 10 Fabrication of p-n junction, Qualitative description of current flow at a junction, Diffusion and depletion capacitance of p-n junctions, Varactors, Ohmic and rectifying contacts, Zener and Avalanche diode, Tunnel diode, Light emitting diode, Laser diode, Photodiodes and Solar cell. Fundamentals of operation of BJT, FET, MOSFET and UJT. Liquid crystal display. High frequency devices: Gunn diode, IMPATT diode |
| <b>September</b> | Thevenin and Norton theorems, Mesh and Node analysis. (Book 3) Admittance, Impedance, Hybrid and Transmission matrices for two-port networks and their applications . Transforming circuit elements to frequency domain (Laplace transforms), Transfer function, location of poles and stability of circuit, Sinusoidal frequency and phase response (Bode plot), Analysis of LP, HP, BP, BR and AP passive filters.   |
| <b>October</b>   | Differential amplifiers, common mode rejection ratio, Transfer characteristics of OPAMP, inverting and noninverting configurations, open loop and close loop gain, Slew rate, Basic internal circuit of IC Opamp. Comparators with hysteresis, Window comparator, Rectangular and triangular wave generators. 555 timer based circuits. Analogue computation – Summing amplifier, Integrators and Differentiators, Solving differential equations and simultaneous linear equations, Logarithmic and antilogarithmic amplifiers, Current-to-voltage and Voltage-to-current converters. Instrumentation amplifiers.   |
| <b>November</b>  | Sallen-key and Multiquad Configurations for LP, HP, BP filters, Active BR and AP filters. Power Devices : pnpn devices, SCR and trigger applications. Communication systems: General communication system, Generation and detection of amplitude modulated, Single-side band, Double-side band suppressed carrier and Frequency modulated wave. ASK, PSK and FSK, Satellite and mobile communication - TDMA, FDMA, CDMA.   |

*Bhagwanth*

**December**

**University Exams**

## LESSON PLAN

### MSC Physics , Semester I and II

| <b>Semester I</b>  | <b>Mathematical Physics I</b>   |
|--------------------|---|
| <b>August</b>      | Complex Variables, Introduction, Cauchy Riemann conditions, Cauchy's Integral theorem, Cauchy's Integral formula, Laurent expansion, singularities, calculus of residues, evaluation of definite integrals, Dispersion relation   |
| <b>September</b>   | Delta and Gamma Functions: Dirac delta function. Delta sequences for one dimensional function, properties of delta function, Orthogonal function and Integral representation of Delta function. Gamma function, Weierstrass form, factorial notation and applications. Beta function. Relation with gamma function.   |
| <b>October</b>     | Dimensional analysis. Vector algebra and vector calculus. (Book 4) Linear algebra, matrices, Cayley-Hamilton Theorem. Eigenvalues and eigenvectors.(Book 4) Differential Equations: Partial differential equations of theoretical physics, separation of variables, singular points, series solutions-Frobenius method, second solution   |
| <b>November</b>    | Special Functions: Bessel function of first and second kind, Generating function, integral representation and recurrence relations for Bessel's functions of first kind, orthogonality. Legendre function: generating function, recurrence relations and special properties, orthogonality. Various Legendre polynomials, Associated Legendre functions: recurrence relations, parity and orthogonality. Hermite functions and Laguerre function. Generating function, Recurrence relations and orthogonality |
| <b>December</b>    | <b>University Exams</b>   |
| <b>Semester II</b> | <b>Mathematical Physics II</b>  |
| <b>January</b>     | Group Theory: Basic definitions, Multiplication table, conjugate elements and classes. Subgroups, Direct product of groups, Isomorphism and Homomorphism. Permutation groups, Definition of representation and its properties. Reducible and irreducible  |

*Shreyas*

## LESSON PLAN

### MSC Physics , Semester I and II

| Semester I       | Mathematical Physics I  |
|------------------|---|
| <b>August</b>    | Complex Variables, Introduction, Cauchy Riemann conditions, Cauchy's Integral theorem, Cauchy's Integral formula, Laurent expansion, singularities, calculus of residues, evaluation of definite integrals, Dispersion relation   |
| <b>September</b> | Delta and Gamma Functions: Dirac delta function. Delta sequences for one dimensional function, properties of delta function, Orthogonal function and Integral representation of Delta function. Gamma function, Weierstrass form, factorial notation and applications. Beta function. Relation with gamma function.   |
| <b>October</b>   | Dimensional analysis. Vector algebra and vector calculus. (Book 4) Linear algebra, matrices, Cayley-Hamilton Theorem. Eigenvalues and eigenvectors.(Book 4) Differential Equations: Partial differential equations of theoretical physics, separation of variables, singular points, series solutions-Frobenius method, second solution   |
| <b>November</b>  | Special Functions: Bessel function of first and second kind, Generating function, integral representation and recurrence relations for Bessel's functions of first kind, orthogonality. Legendre function: generating function, recurrence relations and special properties, orthogonality. Various Legendre polynomials, Associated Legendre functions: recurrence relations, parity and orthogonality. Hermite functions and Laguerre function. | <b>December</b>  | <b>University Exams</b>   |
| Semester II      | Mathematical Physics II   |
| <b>January</b>   | Group Theory: Basic definitions, Multiplication table, conjugate elements and classes. Subgroups, Direct product of groups, Isomorphism and Homomorphism. Permutation groups, Definition of representation and its properties. Reducible and irreducible  |

*Shyam*

|                 |   |
|-----------------|---|
|                 | presentation. Schurs' Lemmas (Statement only), Orthogonal theorem, Characters of a representation. Example of $C_{4v}$ . Topological groups and Lie groups, three dimensional rotation group. Unitary groups: $SU(2)$ , $O(3)$ , the axial rotation group $SO(2)$ . Applications of group theory.   |
| <b>February</b> | Fourier series, General properties, Advantages and applications, Gibbs phenomenon. Development of the Fourier integral, Inversion theorem, Fourier transform, Fourier transforms of derivatives, Momentum representation. Laplace transforms, Laplace transforms of derivatives, Properties of Laplace transform, Faltung theorem, Inverse Laplace transformation   |
| <b>March</b>    | Integral Equations: Definitions and classifications, Neumann series, Separable kernels, Hilbert-Schmidt theory. Green's function in one dimension.<br>Tensors: Introduction, definitions, contraction, direct product, Quotient rule. Pseudo tensors, Levi-Civita symbol, irreducible tensors, Non Cartesian tensors – metric tensor. Christoffel symbols, Covariant differentiation.   |
| <b>April</b>    | Elementary Numerical Analysis: Numerical differentiation, Numerical integration by Simpson and Weddle's rules. Numerical solution of differential equations by Euler and Runge-Kutta Method, Linear and non-linear least square fitting, generation of random numbers, Monte-Carlo technique, integration, simulations. Elementary probability theory, random variables, binomial, Poisson and normal distributions. Central limit theorem. |
| <b>May</b>      | Revision of Important Topics  |
| <b>June</b>     | University Exams  |

*Blueprints*

# LESSON PLAN

## MSc. Physics , Semester II

| Semester II     | STATISTICAL MECHANICS  |
|-----------------|--|
|                 |  |
| <b>January</b>  | The macroscopic and microscopic states, contact between statistics and thermodynamics, classical ideal gas, Gibbs paradox and its solution. Elements of Ensemble Theory : Phase space and Liouville's Theorem, The micro canonical ensemble theory and its application to ideal gas of monatomic particles, equipartition and virial theorems, canonical ensemble and its thermodynamics, partition function, classical ideal gas in canonical ensemble theory, energy fluctuations. |
| <b>February</b> | Equilibrium between a system and a particle-energy reservoir and significance of statistical quantities. Classical ideal gas in grand canonical ensemble theory. Density and energy fluctuations. . Elements of Quantum Statistics :Quantum states and phase space, quantum statistics of various ensembles. An ideal gas in quantum mechanical ensembles, statistics of occupation numbers.   |
| <b>March</b>    | Basic concepts and thermodynamic behaviour of an ideal Bose gas, BoseEinstein condensation, Discussion of gas of photons (the radiation fields) and phonons (TheDebye field). Ideal Fermi Systems : Thermodynamic behaviour of an ideal fermi gas, discussion of heat capacity of a free-electron gas at low temperatures, Pauli paramagnetism   |
| <b>April</b>    | First- and second-order phase transitions (Introduction), Diamagnetism, paramagnetism, and ferromagnetism. a dynamical model of phase transitions, Ising and Heisenberg models. Fluctuations: Thermodynamic Fluctuations, random walk and Brownian motion, introduction to nonequilibrium processes, diffusion equation  |
| <b>May</b>      | <b>University Exams</b>  |

*Bhagwanth*

| Semester II | CLASSICAL ELECTRODYNAMICS II   |
|-------------|--|
| January     | Coulomb's Law, Gauss Law, Scalar potential. Laplace and Poisson's equations. Electrostatic potentials, energy and energy density of the electromagnetic field. Multipole Expansion : Multipole expansion of the scalar potential of a charge distribution. Dipole moment, quadrupole moment. Multipole expansion of the energy of a charge distribution in an external field. Magnetostatics: the differential equations of magnetostatics, Vector potential. Magnetic field of a localized current distribution   |
| February    | Static fields in material media. Polarization vector macroscopic equations. Molecular polarizability and electric susceptibility. Clausius-Mossetti relations. Models of Molecular Polarizability. Energy of charges in dielectric media. Boundary value Problems : Uniqueness Theorem. Dirichlet and Neumann Boundary conditions, Green's Theorem, Formal solution of Electrostatic Boundary value problem with Green function. Method of images with examples. Magnetostatic Boundary value problems.  |
| March       | Faraday's Law of induction. Displacement current. Maxwell equations. Scalar and vector potentials. Gauge transformation, Lorentz and Coulomb gauges, General Expression for the electromagnetic fields energy, conservation of energy, Poynting's Theorem. Conservation of momentum. EM waves in various unbounded media: Wave equation, plane waves in free space and isotropic dielectrics, polarization, energy transmitted by a plane wave, Poynting's theorem for a complex vector field. Waves in conducting media, skin depth, EM waves in rare field plasma and their propagation in ionosphere. |
| April       | Reflection and Refraction of EM waves at plane dielectrics interface, Fresnel's amplitude relations. Reflection and transmission coefficients. Polarization by reflection. Brewster's angle, Total internal reflection, Parallel plate transmission lines, Wave guides, TE and TM waves, Rectangular wave guides and cavity resonators. Radiation from Localized Time Varying Sources: Solutions of the inhomogeneous wave equation in the absence of boundaries. Fields and Radiation of a localized oscillating source. Electric dipole and electric quadrupole fields, centre fed linear antenna.     |
| May         | University Exams   |

*Bhagwanth*

| Semester II | ELECTRONICS-II   |
|-------------|--|
| January     | Boolean algebra, de Morgans theorem, Karnaugh maps. Data processing circuits : Multiplexers, Demultiplexers, Arithmetic building blocks, Encoders, Decoders, Parity generators, PLA. Digital logic families : RTL, DTL, TTL, ECL, CMOS, MOS, Tri-state logic - switching and propagation delay, fan out and fan in, TTL-CMOS and CMOS-TTL interfaces.  |
| February    | Flip-Flops – RS, JK, T, D; clocked, preset and clear operation, race-around conditions in JK Flip-flops, master-slave JK flip-flops, Switch contact bounce circuit. Shift registers, Asynchronous and Synchronous counters (up, down, up-down, decade), Counter design and applications.   |
| March       | A/D Converters : Successive approximation, Counter-type, Dual slope, voltage to frequency and voltage to time conversion techniques, accuracy and resolution. Sample-and-hold circuit. D/A converter using resistive network, accuracy and resolution. Semiconductor memory devices: Organizations, operations, Classification and characteristics of memories, read only memory (ROM organization, PROM, EEPROM), RAM (Bipolar RAM, MOS RAM), Static and Dynamic Random Access Memories, Charged Couple Device Memory, Applications |
| April       | Fundamentals of Microprocessors, Buffer registers, Bus organised computers, SAP-I, Microprocessor ( $\mu$ P) 8085 Architecture, memory interfacing, interfacing I/O devices. Instruction classification, addressing modes, timing diagram, Data transfer, Logic and Branch operations. Microcontroller : Overview of the 8051 family and Architecture. IC Fabrication: Basic ideas of integrated circuits, Epitaxial growth, Diffusion, Masking, Etching, Fabrication of Monolithic Integrated circuits                              |
| May         | University Exams   |

*Bhagwanth*
